

Basic Engineering Design

The Pas Reform Project Management team works hand-in-hand with your company to develop hatchery-specific strategies that optimise the most efficient, performance-enhancing combination of incubators, hatchery climate control systems and automation systems.

Possible design specifications contained in this package (based on Pas Reform incubators)

- Principle hatchery layout and routing drawings
- Database layouts for office and personnel rooms
- General incubator specifications
- Incubator electrical connected values
- Incubator cooling water connected values
- Incubator heating water connected values
- Total calculated design value for cooling system
- Total calculated design value for hot water system
- Total calculated load from incubators on the electrical system
- Ventilation principles (viewed from the setter room and hatcher room side elevation)
- Principle layouts of floors, drains and ceilings
- Installation conditions
- Mechanical operating and maintenance manuals
